**Subject: Central Plaza Traffic Impact Study, City of Lake Elsinore (Updated February 9, 2017)**

Dear Mr. Lukosky:

RK ENGINEERING GROUP, INC. (RK) is pleased to provide this traffic impact study for the proposed Central Plaza project. The currently vacant project site is located on the southeast corner of the Collier Avenue / Central Avenue (SR-74) intersection in the City of Lake Elsinore as shown in Exhibit 1-1. The proposed project, which is planned to open in 2017, consists of the following land uses:

- 53,469 square feet of retail;
- 4,500 square feet of fast food with drive-thru restaurant;
- 3,530 square feet of fast food without drive-thru restaurant; and
- 4,304 square feet of high turnover sit-down restaurant.

Additionally, as part of the proposed project, the following circulation system modifications are planned:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and

- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

This report provides a summary of the findings, analysis procedures, and evaluation of the proposed project with respect to on-site and off-site traffic impacts, pursuant to City of Lake Elsinore requirements and California Department of Transportation (Caltrans) requirements.

The results of the analysis indicate the proposed project can be accommodated assuming implementation of the recommended improvements/mitigation measures identified in this report. The study recommendations are included in the *Findings and Recommendations* section of this report.

*Project Contribution for Mitigation Measures Identified for Existing Plus Project Conditions:*

The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are currently operating deficiently for Existing Conditions and are forecast to continue to operate deficiently for Existing Plus Project Conditions.

The proposed project will be required to make full contribution for implementation of the identified mitigation measures at study facilities that are currently operating acceptably for Existing Conditions and are forecast to operate deficiently for Existing Plus Project Conditions.

*Project Contribution for Mitigation Measures Identified for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project):*

The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are currently operating deficiently for Existing Conditions and are forecast to continue to operate deficiently for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project).

The proposed project will be required to make full contribution for implementation of the identified mitigation measures at study facilities that are currently operating acceptably for Existing Conditions and are forecast to operate deficiently for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project).

Project Contribution for Mitigation Measures Identified for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project): The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are forecast to begin to operate deficiently for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project).

If you have any questions regarding this study, or would like further review, please call us at (949) 474-0809.

Sincerely,  
RK ENGINEERING GROUP, INC.

Alex Tabrizi, PE, TE

## **1.0 Introduction**

---

### **1.1 Purpose of Report and Study Objectives**

The purpose of this traffic impact analysis is to evaluate the development of the Central Plaza project from a traffic circulation standpoint. The currently vacant project site is located on the southeast corner of the Collier Avenue / Central Avenue (SR-74) intersection in the City of Lake Elsinore as shown in Exhibit 1-1. The proposed project, which is planned to open in 2017, consists of the following land uses:

- 53,469 square feet of retail;
- 4,500 square feet of fast food with drive-thru restaurant;
- 3,530 square feet of fast food without drive-thru restaurant; and
- 4,304 square feet of high turnover sit-down restaurant.

Access for the proposed project is planned as follows:

- One right-in/right-out access location on Central Avenue (SR-74);
- One left-in/right-in/right-out access location on Collier Avenue. Left-turn in access at this location will be restricted through construction of a raised center median along Collier Avenue; and
- One full access location at the existing Collier Avenue/Crane Street intersection.

Additionally, as part of the proposed project, the following circulation system modifications are planned:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and

- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

Study objectives include: (1) documentation of existing traffic conditions in the vicinity of the site; (2) evaluation of traffic conditions in the Project Completion (Year 2017) Without and With Cumulative Projects; and (3) determination of on-site and off-site improvements and system management actions needed to achieve City of Lake Elsinore level of service requirements.

This study has been prepared in accordance with the City of Lake Elsinore traffic impact analysis procedures and the approved scope of work contained in Appendix A.

The study evaluates the following facilities based on discussions with City of Lake Elsinore staff and feedback from Caltrans District 8:

- Intersection peak hour Level of Service (LOS) analysis at twelve (12) study locations including the project full access driveways;
- Study intersection peak hour vehicular queue analysis along Central Avenue (SR-74) from Collier Avenue to Dexter Avenue;
- Roadway segment LOS analysis at seven (7) study roadway segments;
- Freeway segment peak hour LOS analysis on the I-15 Freeway in the vicinity of the Central Avenue (SR-74) interchange; and
- Freeway ramp merge/diverge peak hour LOS analysis at the I-15 Freeway interchange with Central Avenue (SR-74).

## **1.2 Site Location**

The currently vacant project site is located on the southeast corner of the Collier Avenue / Central Avenue (SR-74) intersection in the City of Lake Elsinore. Exhibit 1-1 illustrates the site location and traffic analysis study area.

The project site is currently zoned as General Commercial (C2). The proposed project will not require a zone change or General Plan Amendment.

### **1.3 Development Project Description**

The proposed project, which is planned to open in 2017, consists of the following land uses:

- 53,469 square feet of retail;
- 4,500 square feet of fast food with drive-thru restaurant;
- 3,530 square feet of fast food without drive-thru restaurant; and
- 4,304 square feet of high turnover sit-down restaurant.

Access for the proposed project is planned as follows:

- One right-in/right-out access location on Central Avenue (SR-74);
- One left-in/right-in/right-out access location on Collier Avenue. Left-turn in access at this location will be restricted through construction of a raised center median along Collier Avenue; and
- One full access location at the existing Collier Avenue/Crane Street intersection.

Additionally, as part of the proposed project, the following circulation system modifications are planned:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and
- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

The proposed project has been analyzed in one (1) complete phase.

The site plan for the proposed development is shown in Exhibit 1-2.

#### **1.4 Study Area**

The study area consists of Riverside Drive and Central Avenue, designated by Caltrans as State Route 74 (SR-74), and Collier Avenue. It should be noted that SR-74 is under the jurisdiction of California Department of Transportation (Caltrans). The remaining roadway segments and intersections are under the City of Lake Elsinore jurisdiction.

The analysis evaluates the following study scenarios consistent with the City of Lake Elsinore requirements for evaluation of potential traffic impacts:

- Existing Conditions;
- Existing Plus Project Conditions;
- Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project); and
- Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project).

The following study facilities have been evaluated for the study conditions and scenarios listed above:

- A. Intersection peak hour Level of Service (LOS) analysis at the following twelve (12) study locations including the project full access driveways:

### Study Intersections & Jurisdictions

| #   | North-South Street            | East-West Street          | Jurisdiction          |          |
|-----|-------------------------------|---------------------------|-----------------------|----------|
|     |                               |                           | City of Lake Elsinore | Caltrans |
| 1.  | Gunnerson St / Strickland Ave | Riverside Dr (SR-74)      |                       | X        |
| 2.  | Collier Ave                   | Riverside Dr (SR-74)      |                       | X        |
| 3.  | Collier Ave                   | Central Ave (SR-74)       |                       | X        |
| 4.  | Collier Ave                   | Crane St - Project Access | X                     |          |
| 5.  | Collier Ave                   | Chaney St                 | X                     |          |
| 6.  | Collier Ave                   | North Spring St           | X                     |          |
| 7.  | I-15 SB Ramps                 | Central Ave (SR-74)       |                       | X        |
| 8.  | I-15 NB Ramps                 | Central Ave (SR-74)       |                       | X        |
| 9.  | Dexter Ave                    | Central Ave (SR-74)       |                       | X        |
| 10. | Camburn Ave                   | Central Ave (SR-74)       |                       | X        |
| 11. | Rosetta Canyon Dr             | Central Ave (SR-74)       |                       | X        |
| 12. | Collier Ave                   | Project Access            | X                     |          |

B. Study intersection peak hour vehicular queue analysis along Central Avenue (SR-74) from Collier Avenue to Dexter Avenue.

C. Roadway segment LOS analysis at the following seven (7) study roadway segments:

1. Collier Avenue from Riverside Drive to Central Avenue (SR-74);
2. Collier Avenue from Central Avenue to Crane Street;
3. Collier Avenue from Crane Street to Chaney Street;
4. Collier Avenue from Chaney Street to North Spring Street;
5. Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps;

6. Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps; and
7. Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue.

D. Freeway segment peak hour LOS analysis at the following four (4) study segments:

1. Northbound I-15 north of Central Avenue (SR-74);
2. Northbound I-15 south of Central Avenue (SR-74);
3. Southbound I-15 north of Central Avenue (SR-74); and
4. Southbound I-15 south of Central Avenue (SR-74).

E. Freeway ramp merge/diverge peak hour LOS analysis at the following four (4) study locations:

1. I-15 Northbound On-Ramp from Central Avenue (SR-74);
2. I-15 Northbound Off-Ramp at Central Avenue (SR-74);
3. I-15 Southbound Off-Ramp at Central Avenue (SR-74); and
4. I-15 Southbound On-Ramp from Central Avenue (SR-74).

Exhibit 1-1 provides a location map for the study area intersections and roadway segments.

## **2.0 Analysis Methodologies, Performance Criteria, and Thresholds of Significance**

The methodologies used to assess the operation of the study area are outlined in the following sections. The following analysis procedures are discussed:

- Intersection Peak Hour Level of Service Analysis Methodology;
- Intersection Peak Hour Queue Length Analysis Methodology;
- Roadway Segment Level of Service Analysis Methodology;
- Freeway Segment Peak Hour Level of Service Analysis Methodology; and
- Freeway Ramp Merge and Diverge Peak Hour Level of Service Analysis Methodology.

This section also discusses the agency-established applicable performance criteria and thresholds of significance for the study facilities.

### **2.1 Intersection Peak Hour Level of Service Analysis Methodology**

Level of service (LOS) is commonly used as a qualitative description of intersection operation and is based on the capacity of the intersection and the volume of traffic using the intersection.

Consistent with City of Lake Elsinore and Caltrans requirements, the methodology used to assess the operation of the study area intersections is the 2000 Highway Capacity Manual (HCM 2000). Synchro analysis software was used to calculate the HCM methodology at the study intersections.

The HCM defines level of service as a qualitative measure which describes operational conditions within a traffic stream, generally in terms of such factors as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate LOS (Level of Service) conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted.

For signalized intersections, average control delay per vehicle is used to determine the level

of service. For all way stop controlled intersections, the level of service is also determined based on the average control delay per vehicle. For intersections with stop control on the minor street only, the calculation of level of service is dependent on the occurrence of gaps occurring in the traffic flow of the main street, and the level of service is determined based on the worst individual movements or movements sharing a single lane. The intersection Level of Service analysis utilizes the following analysis parameters consistent with the City of Lake Elsinore requirements for evaluation of potential traffic impacts:

1. *Ideal Flow Rate:*

Ideal flow value of 1,900 vehicles per lane per hour for all lanes.

2. *Lost Time*

A lost time of four (4) seconds per phase was utilized.

3. *Minimum Green Time*

A minimum green time of 7 seconds was utilized.

4. *Level of Service Ranges:*

The 2000 HCM analysis methodology describes the operation of an intersection using a range of LOS from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding ranges of stopped delay experienced per vehicle for signalized and unsignalized intersections as shown in the table below.

**HCM Intersection LOS & Delay Ranges**

| LOS | Average Control Delay Per Vehicle (Seconds) |               |
|-----|---------------------------------------------|---------------|
|     | Signalized                                  | Unsignalized  |
| A   | 0.00 - 10.00                                | 0.00 - 10.00  |
| B   | 10.01 - 20.00                               | 10.01 - 15.00 |
| C   | 20.01 - 35.00                               | 15.01 - 25.00 |
| D   | 35.01 - 55.00                               | 25.01 - 35.00 |
| E   | 55.01 - 80.00                               | 35.01 - 50.00 |
| F   | >80.00                                      | >50.00        |

**Source:** Highway Capacity Manual

## 2.2 Intersection Peak Hour Vehicular Queue Length Analysis Methodology

The *Highway Capacity Manual (HCM)* 95<sup>th</sup> percentile queue analysis methodology has been utilized to evaluate peak hour vehicular queues. The Synchro analysis software has been utilized.

## 2.3 Roadway Segment Level of Service Analysis Methodology

Level of service (LOS) is commonly used as a qualitative description of roadway segment operation and is based on the daily capacity of the roadway segment and the daily volume of traffic using the roadway segment.

Study roadway segment LOS and operation is evaluated utilizing the volume to capacity (v/c) methodology. The level of service is determined based on the numerical ratio obtained by dividing the daily traffic volume of the roadway segment by its daily capacity identified by the General Plan Circulation Element for the corresponding roadway classification.

The V/C ratio methodology describes the operation of a roadway segment using a range of LOS from LOS A to LOS F, based on the corresponding ranges as shown in the table below.

**Roadway Volume-to-Capacity Ranges & LOS**

| LOS | Volume-to-Capacity Ratio |
|-----|--------------------------|
| A   | 0.00 – 0.60              |
| B   | 0.61 – 0.700             |
| C   | 0.71 – 0.80              |
| D   | 0.81 – 0.90              |
| E   | 0.91 – 1.00              |
| F   | > 1.00                   |

The following roadway capacity values are utilized based on the City of Lake Elsinore General Plan Circulation Element:

**City of Lake Elsinore Roadway Segment Daily Capacities**

| Roadway Classification | Number of Lanes | Maximum Two-Way Traffic Volume (ADT)<br>Service Level E |
|------------------------|-----------------|---------------------------------------------------------|
| Collector              | 2               | 13,000                                                  |
| Divided Collector      | 2               | 18,000                                                  |
| Secondary              | 4               | 25,900                                                  |
| Major                  | 4               | 34,100                                                  |
| Urban Arterial         | 6               | 53,900                                                  |
| Urban Arterial         | 8               | 71,800                                                  |

## 2.4 Freeway Segment Level of Service Analysis Methodology

Caltrans advocates the use of HCM analysis methodology to analyze the operation of freeway segments and facilities. HCM analysis methodology describes the operation of freeway mainline segment facilities using a range of LOS from LOS A to LOS F based on corresponding density (passenger cars/mile/lane) shown in the table below.

**Freeway Segment  
LOS & Density Ranges**

| LOS | Density (pc/mi/lane)               |
|-----|------------------------------------|
| A   | $\leq 11$                          |
| B   | $> 11 - 18$                        |
| C   | $> 18 - 26$                        |
| D   | $> 26 - 35$                        |
| E   | $> 35 - 45$                        |
| F   | Demand Exceeds Capacity ( $> 45$ ) |

**Source:** *Highway Capacity Manual*

**Notes:** pc/mi/lane = passenger cars per mile per lane.

## 2.5 Freeway Ramp Merge/Diverge Level of Service Analysis Methodology

Caltrans advocates the use of HCM analysis methodology to analyze the operation of freeway ramps and facilities. HCM analysis methodology describes the operation of freeway mainline segment facilities using a range of LOS from LOS A to LOS F based on corresponding density (passenger cars/mile/lane) shown in the table below.

**Freeway Ramp Merge/Diverge  
LOS & Density Ranges**

| LOS | Density (pc/mi/lane)    |
|-----|-------------------------|
| A   | $\leq 10$               |
| B   | $> 10 - 20$             |
| C   | $> 20 - 28$             |
| D   | $> 28 - 35$             |
| E   | $> 35$                  |
| F   | Demand Exceeds Capacity |

**Source:** *Highway Capacity Manual*

**Notes:** pc/mi/lane = passenger cars per mile per lane.

## 2.6 Level of Service Performance Criteria & Thresholds of Significance

City of Lake Elsinore and Caltrans' goal for level of service operation is LOS D or better. Hence, any study facility (including study intersections, study roadway segments, and freeway study facilities) operating at LOS "E" or LOS "F" will be considered deficient and mitigation measures would need to be identified to achieve acceptable LOS.

## 2.7 Vehicular Queueing Performance Criteria & Thresholds of Significance

The City of Lake Elsinore and Caltrans do not have established and adopted performance criteria and significant impact thresholds for vehicular queueing. Hence, the vehicular queueing analysis presented in this report is strictly for informational purposes.

## **3.0 City of Lake Elsinore General Plan**

---

### **3.1 City of Lake Elsinore General Plan Circulation Element**

Exhibit 3-1 shows the City of Lake Elsinore General Plan Roadway Classifications, and Exhibit 3-2 shows the City of Lake Elsinore General Plan Roadway Cross Sections.

For the roadway segments immediately adjacent to the site, the ultimate buildout General Plan classifications are as follows:

- Collier Avenue north of Central Avenue – Urban Arterial (6 lanes, 120 feet right-of-way)
- Collier Avenue south of Central Avenue – Major (4 lanes, 100 feet right-of-way)
- Central Avenue – Augmented Urban Arterial (8 lanes)

### **3.2 City of Lake Elsinore Public Transit Service**

Exhibit 3-3 shows the existing transit system in the project site vicinity and City of Lake Elsinore. The following bus routes are currently operating near the site:

- Routes 7 and 22

It is recommended that as additional development occurs within the area, the City consider expanding service to accommodate the travel demand of the community and reduce vehicle miles traveled.

### **3.3 City of Lake Elsinore Bikeway Plan**

Exhibit 3-4 shows the City of Lake Elsinore's bikeway plan. The following are bikeway paths existing or planned near the project site:

Collier Avenue: Class II Bikeway

## **4.0 Circulation System & Existing Traffic Volumes**

---

This section provides a discussion of existing study area conditions and traffic volumes.

### **4.1 Study Area Existing & Future-Planned Geometry & Traffic Controls**

Exhibit 4-1 shows the existing intersection geometrics and traffic controls for the study area.

It should be noted based on discussions with Caltrans, the following future-planned circulation system modifications are planned within the study area:

- A. Based on the Transportation Concept Report for the I-15 Freeway in the vicinity of the Central Avenue (SR-74) interchange, this section of the freeway is planned to be widened from its current configuration as three (3) mixed-flow lanes in each direction of travel to consist of the following:
  - Three (3) mixed flow lanes and one (1) HOV lane in each direction travel south of the Central Avenue (SR-74) interchange; and
  - Four (4) mixed flow lanes and one (2) HOT lane in each direction travel north of the Central Avenue (SR-74) interchange.
- B. Caltrans currently has plans to increase the I-15 / Central Avenue (SR-74) interchange capacity by reconstructing the interchange as a Type L-9.

It should also be noted **none** of the above mentioned circulation system modifications are assumed to be in place when evaluating potential traffic impacts associated with the proposed project in this analysis.

### **4.2 Existing Intersection & Roadway Segment Traffic Volumes**

Existing AM and PM peak hour traffic volumes for study area intersections are shown on Exhibit 4-2. These volumes are based upon manual peak hour turning movement counts compiled for RK in November 2015.

AM peak period intersection counts were collected from 7:00 AM to 9:00 AM; PM peak period intersection counts were collected from 4:00 PM to 6:00 PM

The counts used in this analysis were taken from the highest hour within the peak period counted. Intersection traffic count worksheets are included in Appendix B.

Existing average daily traffic (ADT) volumes on arterial highways in the study area are shown on Exhibit 4-2 as well. Per standard practice, ADT volumes for the roadway segments within the study area are factored up from the PM peak hour counts, using the following formula for each intersection leg:

$$\text{Peak Hour (Approach Volume + Exit Volume)} * 12 = \text{Leg Volume}$$

### **4.3 Existing Freeway Segment Traffic Volumes**

RK utilized Caltrans Performance Measurement System (PeMS) to obtain existing AM and PM peak hour directional traffic volumes for Interstate 15 (I-15) freeway study segments. The data is based on the most recent existing traffic volumes published by Caltrans at the time of preparation of this report (January 2016).

Existing freeway study facility traffic volumes are summarized in Table 4-1.

## **5.0 Projected & Future Traffic Volumes**

---

This section provides a discussion on methodologies utilized to derive future traffic volumes for the study area.

### **5.1 Project Traffic Volumes**

#### **5.1.1 Project Trip Generation**

Trip generation represents the amount of traffic that is attracted and produced by a development. The trip generation for the project is based upon the specific land uses that have been planned for this development.

Trip generation rates for the proposed development are shown in Table 5-1 and are from the *Institute of Transportation Engineers (ITE) Trip Generation, 9th Edition, 2012*. This publication provides a comprehensive evaluation of trip generation rates for a variety of land uses.

The trip generation for the project has been based on the following land uses:

- 53,469 square feet of retail;
- 4,500 square feet of fast food with drive-thru restaurant;
- 3,530 square feet of fast food without drive-thru restaurant; and
- 4,304 square feet of high turnover sit-down restaurant.

Trip generation summary for the proposed development is shown in Table 5-2. The proposed development is projected to generate approximately 7,590 trip-ends per day including 458 total vehicles per hour during the AM peak hour and 479 total vehicles per hour during the PM peak hour. However, due to the nature of the land uses, pass-by trip reductions have been utilized.

### **5.1.2 Project Pass-by Trip Adjustment**

Studies have shown that for some developments such as the one proposed, a portion of the site-generated vehicle trips are already present in the adjacent passing stream of traffic. These types of trips are known as pass-by trips. Pass-by trips are made by traffic already using the adjacent roadway and enter the site as an intermediate stop on the way from another destination. The trip may not necessarily be “generated” by the land use under study, and thus, no new trips are added to the roadway system. The proposed project is planned to include retail and restaurant uses, which both allow for a pass-by trip reduction.

The pass-by trip adjustments utilized are based on data collected and published by the *Institute of Transportation Engineers (ITE)*. For the fast food without drive-through restaurant land use, ITE does not have a compiled database available. Hence, this analysis conservatively utilizes a pass-by adjustment of 25 percent for fast food without drive-through restaurant land use.

Pass-by reductions are not applied to the project driveways or to the intersection immediately adjacent to the site (Collier Avenue / Central Avenue).

After accounting for the applicable pass-by adjustments, the proposed project is projected to generate approximately 7,269 net trip-ends per day with 319 net total vehicles per hour during the AM peak hour and 297 net total vehicles per hour during the PM peak hour.

It should be noted this analysis conservatively does not account for any potential trip reductions associated with internal capture and patrons visiting more than one destination on a single trip.

### **5.1.3 Project Trip Distribution & Assignment**

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is heavily influenced by the geographical location of the site, the location of residential, employment and recreational opportunities, and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses, and highways within the community and existing traffic volumes.

Trip distribution for this study has been based upon near-term conditions, based upon those highway facilities, which are either in place or will be implemented over the next few years, which represents the buildout occupancy for the proposed development. The trip distribution patterns for the proposed project have been developed while working with the City of Lake Elsinore staff and are graphically depicted on Exhibit 5-1.

The assignment of traffic from the site to the adjoining roadway system has been based upon the site's trip generation, trip distributions, existing and proposed arterial highways, and local street systems, which would be in place by the time of initial occupancy of the site.

#### **5.1.4 Modal Split**

Modal split denotes the proportion of traffic generated by a project that would use any of the transportation modes, namely buses, cars, bicycles, motorcycles, trains, carpools, etc. The traffic reducing potential of public transit and other modes is significant. However, the traffic projections are "conservative" in that public transit and alternative transportation may be able to reduce the traffic volumes. Thus, no modal split reduction is applied to the projections. With the implementation of transit service and provision of multi-modal transportation ideas and incentives, the automobile traffic demand can be reduced significantly.

#### **5.1.5 Project Peak Hour Traffic Volumes**

Project peak hour traffic volumes have been calculated throughout the study area. The project's AM and PM peak hour intersection turning movement volumes and average daily traffic on the roadway segments are shown on Exhibit 5-2.

### **5.2 Existing Plus Project Conditions Traffic Volumes**

Existing Plus Project traffic volumes are derived by combining existing traffic volumes with project-generated traffic volumes. Existing Plus Project AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit 5-3.

Existing Plus Project freeway study facility traffic volumes are summarized in Table 4-1.

### **5.3 Background Traffic Volumes & Method of Projection**

Project Completion Year is expected to be in the Year 2017.

To assess future forecast traffic conditions, project traffic is combined with existing traffic, area wide/ambient growth, and traffic associated with other background/cumulative projects that are currently planned and/or approved but not yet constructed.

To account for area wide/ambient growth in the study area, an annual growth rate of two-percent (2%) has been applied to existing traffic volumes over a two-year period, as directed by City staff.

Information for background/cumulative projects for the area was obtained from the City of Lake Elsinore and also the County of Riverside.

Table 5-3 lists the proposed land uses for the nearby developments as obtained from the City of Lake Elsinore and County of Riverside during the time of preparation of this study.

Exhibit 5-4 shows the general location of the background/cumulative projects.

Table 5-3 also summarizes the daily and peak hour trip generation forecasts associated with the background/cumulative projects.

The background/cumulative project's AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit 5-5.

#### **5.4 Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) Traffic Volumes**

Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) traffic includes existing traffic volumes on surrounding roadways, area wide growth, and project-generated traffic. The AM and PM peak hour intersection turning movement volumes and average daily traffic for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) are shown on Exhibit 5-6.

Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) freeway study facility traffic volumes are summarized in Table 4-1.

#### **5.5 Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) Traffic Volumes**

Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) traffic includes existing traffic volumes on surrounding roadways, area wide growth, traffic associated with cumulative projects, and project-generated traffic. The AM and PM peak hour intersection turning movement volumes and average daily traffic for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) are shown on Exhibit 5-7.

Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) freeway study facility traffic volumes are summarized in Table 4-1.

## 6.0 Traffic Signal Warrant Evaluation

For each analysis scenario, existing unsignalized study intersections have been evaluated for signalization based on the peak hour and daily volume warrants and procedures contained in the *California Manual on Uniform Traffic Control Devices (CA MUTCD), 2014 Edition*.

The table below summarizes the results of the *MUTCD* signal warrant analysis at the unsignalized study intersections for all analysis scenarios evaluated as part of this report; detailed *MUTCD* signal warrant analysis sheets are contained in Appendix C.

| Unsignalized Study Intersection                 | Analysis Scenario Signal Warrant Met? |              |              |                                  |              |              |                                                                             |              |              |                                                                                              |              |              |

As shown in the table above, the following two unsignalized study intersections are currently warranted for installation of a traffic signal and continue to warrant installation of a traffic signal for the future analysis scenarios based on existing and future peak hour and/or daily traffic volumes and projections.

- Gunnerson Street – Strickland Avenue / Riverside Drive (AM peak hour warrant satisfied); and
- Collier Avenue / Chaney Street (AM, PM, and Daily warrants satisfied).

## **7.0 Study Intersection Peak Hour LOS Analysis**

---

This section provides a discussion on the study intersection peak hour level of service analysis and findings.

### **7.1 Existing Study Intersection Peak Hour Level of Service**

Existing peak hour LOS for the study intersections have been calculated utilizing existing study intersection geometry previously shown in Exhibit 4-1 and the existing manual AM and PM peak hour turning movement counts compiled for RK and previously shown in Exhibit 4-2.

Existing Conditions utilizes existing traffic signal timing data provided by Caltrans.

Table 7-1 summarizes Existing Conditions peak hour LOS of the study intersections. HCM calculation worksheets for Existing Conditions are provided in Appendix D.

As shown in Table 7-1, the study intersections are currently operating at an acceptable LOS (LOS D or better) for Existing Conditions, with the exception of the following study intersections:

- Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) (both AM and PM peak hours);
- Int 5 – Collier Avenue / Chaney Street (AM peak hour only); and
- Int 9 – Dexter Avenue / Central Avenue (SR-74) (both AM and PM peak hours).

As shown in Section 6 of this report, the intersections of Gunnerson Street – Strickland Avenue / Riverside Drive and Collier Avenue / Chaney Street satisfy one or more of the MUTCD traffic signal warrants under existing as well as all future analysis scenarios.

## **7.2 Existing Plus Project Conditions Study Intersection Peak Hour Level of Service**

Existing Plus Project Conditions peak hour LOS for the study intersections have been calculated utilizing the Existing Plus Project traffic volumes previously shown in Exhibit 5-3.

Existing Plus Project Conditions assumes implementation of the following circulation system modifications planned as part of the proposed project:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and
- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

Existing Plus Project Conditions study intersection geometry is shown in Exhibit 7-1.

Existing Plus Project Conditions utilizes existing traffic signal timing parameters and data provided by Caltrans with optimized cycles and timing.

Table 7-2 summarizes Existing Plus Project Conditions peak hour LOS of the study intersections. HCM calculation worksheets for Existing Plus Project Conditions are provided in Appendix E.

As shown in Table 7-2, the study intersections are forecast to continue to operate at an acceptable LOS (LOS D or better) for Existing Plus Project Conditions, with the exception of the following study intersections:

- Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) (both AM and PM peak hours); and
- Int 5 – Collier Avenue / Chaney Street (AM peak hour only).

Hence, the above listed study intersections are required to be mitigated to an acceptable Level of Service (LOS D or better) based on agency-established thresholds and criteria.

As previously shown in Table 7-1, the Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) study intersection and the Collier Avenue / Chaney Street study intersection are currently operating deficiently for Existing Conditions. Also, as shown in Section 6 of this report, the intersections satisfy one or more of the MUTCD traffic signal warrants under existing as well as all future analysis scenarios.

### **7.2.1 Existing Plus Project Conditions Mitigation Measures & Mitigated Peak Hour Level of Service**

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Existing Plus Project Conditions:

#### **Int Mitigation #1**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

#### **Int Mitigation #2**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall

make a fair share contribution to implement the following:

- a) Signalize the intersection.

Mitigated Existing Plus Project Conditions study intersection geometry is shown in Exhibit 7-2.

Table 7-2 summarizes Existing Plus Project Conditions peak hour LOS of the study intersections assuming implementation of the identified mitigation measures. HCM calculation worksheets for Mitigated Existing Plus Project Conditions are provided in Appendix F.

As shown in Table 7-2, assuming implementation of the identified mitigation measures, the study intersections are forecast to operate at an acceptable LOS (LOS D or better) for Existing Plus Project Conditions and the impacts are reduced to a level considered less than significant.

### **7.3 Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) Study Intersection Peak Hour Level of Service**

Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) peak hour LOS for the study intersections have been calculated utilizing the Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) traffic volumes previously shown in Exhibit 5-6.

Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) does not assume implementation of the mitigation measures identified in the previous section. However, it does assume implementation of the following circulation system modifications planned as part of the proposed project:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and

- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

Project Completion Conditions study intersection geometry is shown in Exhibit 7-3.

Project Completion Conditions utilizes existing traffic signal timing parameters and data provided by Caltrans with optimized cycles and timing.

Table 7-3 summarizes Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) peak hour LOS of the study intersections. HCM calculation worksheets for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) are provided in Appendix G.

As shown in Table 7-3, the study intersections are forecast to continue to operate at an acceptable LOS (LOS D or better) for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project), with the exception of the following study intersections:

- Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) (both AM and PM peak hours);
- Int 4 – Collier Avenue / Crane Street (both AM and PM peak hours); and
- Int 5 – Collier Avenue / Chaney Street (AM peak hour).

Hence, the above listed study intersections are required to be mitigated to an acceptable Level of Service (LOS D or better) based on agency-established thresholds and criteria.

As previously discussed in Section 7.1, the Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) study intersection and the Collier Avenue / Chaney Street study intersection are currently operating deficiently for Existing Conditions. Also, as shown in Section 6 of this report, the intersections satisfy one or more of the MUTCD traffic signal warrants under existing as well as all future analysis scenarios.

As also shown in Section 6 of this report, the intersection of Collier Avenue / Crane Street does **not** satisfy the evaluated MUTCD traffic signal warrants for the analysis scenarios evaluated as part of this report. To achieve acceptable LOS at this intersection for Project

Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project), installation of a traffic signal would be required.

### **7.3.1 Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) Mitigation Measures & Mitigated Peak Hour Level of Service**

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project):

#### **Int Mitigation #3**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #1*):

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

#### **Int Mitigation #4**

**Int 4 – Collier Avenue / Crane Street:** The project applicant shall implement the following:

- a) Signalize the intersection.

#### **Int Mitigation #5**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #2*):

- a) Signalize the intersection.

Mitigated Project Completion Conditions study intersection geometry is shown in Exhibit 7-4.

For the intersection of Collier Avenue / Crane Street, as shown in Section 6 of this report, the study intersection is forecast to not satisfy the traffic signal warrants for any of the analysis scenarios. Signalization would be required to achieve acceptable operation.

Table 7-3 summarizes Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) peak hour LOS of the study intersections assuming implementation of the identified feasible mitigation measures. HCM calculation worksheets for Mitigated Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) are provided in Appendix H.

As shown in Table 7-3, assuming implementation of the identified feasible mitigation measures, the study intersections are forecast to operate at an acceptable LOS (LOS D or better) for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project) and the identified impacts are forecast to be reduced to a level considered less than significant.

#### **7.4 Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) Study Intersection Peak Hour Level of Service**

Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) peak hour LOS for the study intersections have been calculated utilizing the Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) traffic volumes previously shown in Exhibit 5-7.

Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) does not assume implementation of the mitigation measures identified in the previous sections. However, it does assume implementation of the following circulation system modifications planned as part of the proposed project:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and
- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

Cumulative Conditions study intersection geometry is shown in Exhibit 7-5.

Cumulative Conditions utilizes existing traffic signal timing parameters and data provided by Caltrans with optimized cycles and timing.

Table 7-4 summarizes Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) peak hour LOS of the study intersections. HCM calculation worksheets for Existing Plus Project Conditions are provided in Appendix I.

As shown in Table 7-4, the study intersections are forecast to continue to operate at an acceptable LOS (LOS D or better) for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project), with the exception of the following study intersections:

- Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) (both AM and PM peak hours);
- Int 4 – Collier Avenue / Crane Street (both AM and PM peak hours);
- Int 5 – Collier Avenue / Chaney Street (both AM and PM peak hours); and
- Int 9 – Dexter Avenue / Central Avenue (SR-74) (PM peak hour only).

As previously discussed in Section 7.1, the Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74) study intersection and the Collier Avenue / Chaney Street study intersection are currently operating deficiently for Existing Conditions. Also, as shown in Section 6 of this report, the intersections satisfy one or more of the MUTCD traffic signal warrants under existing as well as all future analysis scenarios.

#### **7.4.1 Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) Mitigation Measures and Mitigated Peak Hour Level of Service**

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project):

##### **Int Mitigation #6**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #1 & #3*):

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

**Int Mitigation #7**

**Int 4 – Collier Avenue / Crane Street:** This study intersection is forecast to also be deficient for Existing Plus Project Conditions. The project applicant shall implement the following (*identical to Int Mitigation #4*):

- a) Signalize the intersection.

**Int Mitigation #8**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #2 & #5*):

- a) Signalize the intersection.

**Int Mitigation #9**

**Int 9 – Dexter Avenue / Central Avenue (SR-74):** The project applicant shall make a fair share contribution to implement the following:

- a) Modify the eastbound Central Avenue (SR-74) approach from one left-turn lane, three through lanes and one right-turn lane to consist of one left-turn lane, two through lanes, one shared through/right-turn lanes and one right-turn lane.

Mitigated Cumulative Conditions study intersection geometry is shown in Exhibit 7-6.

A conceptual layout of the mitigation measure at the Dexter Avenue / Central Avenue (SR-74) study intersection is shown in Exhibit 7-7.

For the intersection of Collier Avenue / Crane Street, as shown in Section 6 of this report, the study intersection is forecast to not satisfy the traffic signal warrants for any of the analysis scenarios. Signalization would be required to achieve acceptable operation.

Table 7-4 summarizes Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) peak hour LOS of the study intersections assuming implementation of the identified feasible mitigation measures. HCM calculation worksheets for Existing Plus Project Conditions are provided in Appendix J.

As shown in Table 7-4, assuming implementation of the identified feasible mitigation measures, the study intersections are forecast to operate at an acceptable LOS (LOS D or better) for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) and the identified impacts are forecast to be reduced to a level considered less than significant.

| 12. Project Access (EW)                  | n/a                          | n/a                                        | n/a | n/a | n/a        | n/a | n/a | n/a       | n/a | n/a | n/a       | n/a | n/a | n/a                          | n/a   | n/a              | n/a      |

<sup>1</sup> When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "0" is indicated for the right or left turn, the movement is either non-existent or may be shared with the through movement.

L = Left; T = Through; R = Right; 1! = Left/Thru/Right; > = Right Turn Overlap; >> = Free Right Turn; **Improvements** = Improvements  
Deficient intersection operation is shown in **Bold**.

<sup>2</sup> Analysis Software: Synchro, Version 8.0. Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with traffic signal or all-way stop control. For intersections with cross-street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal  
CSS = Cross Street Stop  
AWS = All Way Stop  
n/a = Future intersection as part of project

<sup>4</sup> The intersection currently operates as a three-leg stop, with the southbound movement free-flowing. However, for analysis purposes, the intersection is considered an all-way stop. This calculation is conservative, as the southbound movement will normally have zero delay.

<sup>1</sup> When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "0" is indicated for the right or left turn, the movement is either non-existent or may be shared with the through movement.

L = Left; T = Through; R = Right; 1! = Left/Thru/Right; > = Right Turn Overlap; >> = Free Right Turn; **Bold Underline** = Improvements

Deficient intersection operation is shown in **Bold**.

<sup>2</sup> Analysis Software: Synchro, Version 8.0. Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with traffic signal or all-way stop control. For intersections with cross-street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal  
CSS = Cross Street Stop  
AWS = All Way Stop

<sup>4</sup> The intersection currently operates as a three-leg stop, with the southbound movement free-flowing. However, for analysis purposes, the intersection is considered an all-way stop. This calculation is conservative, as the southbound movement will normally have zero delay.

**TABLE 7-3**  
**Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project)**  
**Study Intersection Peak Hour LOS**

| Intersection                                                                                                                                                                                                        | Traffic Control <sup>3</sup>                            | Intersection Approach Lane(s) <sup>1</sup>        |                                                  |                                                  |                                                  |                                                   |                                                   |                                                   |                                                 |                                                   |                                                |                                                  |                                                         | Delay <sup>2</sup><br>(Seconds)                        |                                                   | Level of Service                           |        |

<sup>1</sup> When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "0" is indicated for the right or left turn, the movement is either non-existent or may be shared with the through movement.

L = Left; T = Through; R = Right; 1! = Left/Thru/Right; > = Right Turn Overlap; >> = Free Right Turn; **Improvements** = Improvements  
Deficient intersection operation is shown in **Bold**.

<sup>2</sup> Analysis Software: Synchro, Version 8.0. Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with traffic signal or all-way stop control. For intersections with cross-street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal  
CSS = Cross Street Stop  
AWS = All Way Stop

<sup>4</sup> The intersection currently operates as a three-leg stop, with the southbound movement free-flowing. However, for analysis purposes, the intersection is considered an all-way stop. This calculation is conservative, as the southbound movement will normally have zero delay.

**TABLE 7-4**  
**Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulatives Plus Proposed Project)**  
**Study Intersection Peak Hour LOS**

<sup>1</sup> When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "0" is indicated for the right or left turn, the movement is either non-existent or may be shared with the through movement.

L = Left; T = Through; R = Right; 1! = Left/Thru/Right; > = Right Turn Overlap; >> = Free Right Turn; **Bold Underline** = Improvements

Deficient intersection operation is shown in **Bold**.

<sup>2</sup> Analysis Software: Synchro, Version 8.0. Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with traffic signal or all-way stop control. For intersections with cross-street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> TS = Traffic Signal  
CSS = Cross Street Stop  
AWS = All Way Stop

<sup>4</sup> The intersection currently operates as a three-leg stop, with the southbound movement free-flowing. However, for analysis purposes, the intersection is considered an all-way stop. This calculation is conservative, as the southbound movement will normally have zero delay.

## **8.0 Peak Hour Vehicular Queue Analysis**

---

As requested by Caltrans, a peak hour 95<sup>th</sup> percentile vehicular queue evaluation has been prepared for the study intersections along Central Avenue (SR-74) from Collier Avenue to Dexter Avenue as well as the full access project site driveway on Collier Avenue. The queue analysis has been prepared for all analysis scenarios evaluated as part of this study.

As previously noted, the City of Lake Elsinore and Caltrans do not have established and adopted performance criteria and significant impact thresholds for vehicular queuing. Hence, the vehicular queuing analysis presented in this report is strictly for informational purposes.

Table 8-1 summarizes the results of the 95<sup>th</sup> percentile vehicular queue evaluation for all analysis scenarios.

HCM 95<sup>th</sup> percentile vehicular queue calculation worksheets for the scenarios are contained in Appendices D, E, G, and H.

As previously noted in Section 4.1, Caltrans currently has plans to increase the I-15 / Central Avenue (SR-74) interchange capacity by reconstructing the interchange as a Type L-9. The interchange reconfiguration is expected to eliminate left-turn movement from Central Avenue onto the I-15 on-ramps and improve the vehicular queueing at this location. It should be noted, this analysis does not assume the future planned improvements at the interchange and the reconfiguration of the ramps.

**TABLE 8-1**  
**HCM 95th Percentile Vehicular Queue Analysis Summary**

The City of Lake Elsinore and Caltrans do not have established and adopted performance criteria and significant impact thresholds for vehicular queuing. Hence, the vehicular queuing analysis presented in this report is strictly for informational purposes.

<sup>1</sup> NB = Northbound; SB = Southbound; EB = Eastbound; WB = Westbound.

<sup>2</sup> Through lane storage capacity is measured as distance to the next intersection.

<sup>3</sup> Queue reported is the 95th percentile queue per lane.

<sup>4</sup> Utilizes Existing Signal Timing Data.

<sup>5</sup> Utilizes Optimized Signal Timing.

## **9.0 Study Roadway Segment LOS Analysis**

---

This section provides a discussion on the study roadway segment level of service analysis and findings.

The study evaluates the following seven (7) study roadway segments:

1. Collier Avenue from Riverside Drive to Central Avenue (SR-74);
2. Collier Avenue from Central Avenue to Crane Street;
3. Collier Avenue from Crane Street to Chaney Street;
4. Collier Avenue from Chaney Street to North Spring Street;
5. Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps;
6. Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps; and
7. Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue.

Table 9-1 summarizes the results of the study roadway segment analysis for all analysis scenarios evaluated as part of this study utilizing existing roadway segment geometry and capacities.

As shown in Table 9-1, all of the study roadway segments are currently operating at an acceptable LOS (LOS D or better) and are forecast to continue to operate at an acceptable LOS (LOS D or better) for all of the analysis scenarios evaluated as part of this report with the exception of the following three study roadway segments which are forecast to operate at a deficient LOS (LOS E or worse) under Cumulative Conditions:

1. Collier Avenue from Riverside Drive to Central Avenue (SR-74);
6. Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps; and

7. Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue.

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study roadway segment to a level considered less than significant for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project):

**Roadway Mitigation #1**

**Segment 1 – Collier Avenue from Riverside Drive to Central Avenue (SR-74):** The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from four-lanes to its ultimate classification as a six-lane Urban Arterial.

**Roadway Mitigation #2**

**Segment 6 – Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps:** The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.

**Roadway Mitigation #3**

**Segment 7 – Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue:** The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.

As shown in Table 9-1, assuming implementation of the identified feasible mitigation measures, the study roadway segments are forecast to operate at an acceptable LOS (LOS D or better) for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project) and the identified impacts are forecast to be reduced to a level considered less than significant.

**TABLE 9-1**  
**Study Roadway Segment Analysis Summary**

| Study Roadway Segment               | General Plan                       |                | No. of Lanes |                       |                                                                             |                                                                                      | Daily Capacity |                       |                                                                             |                                                                                      | Daily Traffic Volume |                        |                       |                                                                             |                            |                                                                                      | V/C Ratio |                       |                                                                             |                                                                                      | LOS      |                       |                                                                             |                                                                                      |

## **10.0 Study Freeway Segment LOS Analysis**

---

This section provides a discussion on the study freeway segment level of service analysis and findings.

The study evaluates the following four (4) study freeway segments:

1. Northbound I-15 north of Central Avenue (SR-74);
2. Northbound I-15 south of Central Avenue (SR-74);
3. Southbound I-15 north of Central Avenue (SR-74); and
4. Southbound I-15 south of Central Avenue (SR-74).

Table 10-1 summarizes the results of the study freeway segment analysis for all analysis scenarios evaluated as part of this study utilizing existing freeway segment geometry and capacities. Detailed study freeway segment analysis worksheets are contained in Appendix K.

As shown in Table 10-1, the study freeway segments are currently operating at an acceptable LOS (LOS D or better) and are forecast to continue to operate at an acceptable LOS for all future analysis scenarios evaluated as part of this study.

**TABLE 10-1**  
**Freeway Segment Analysis Summary**

| Basic Freeway Study Segment  | Analysis Scenario |     |              |     |                       |     |              |     |                                                                                |     |              |     |                                                                                            |     |              |     |

## **11.0 Study Freeway Ramp Merge/Diverge LOS Analysis**

This section provides a discussion on the study freeway ramp merge/diverge level of service analysis and findings.

The study evaluates the merge and diverge operations at the following four (4) study freeway ramps:

1. I-15 Northbound On-Ramp from Central Avenue (SR-74);
2. I-15 Northbound Off-Ramp at Central Avenue (SR-74);
3. I-15 Southbound Off-Ramp at Central Avenue (SR-74); and
4. I-15 Southbound On-Ramp from Central Avenue (SR-74).

Table 11-1 summarizes the results of the study freeway ramp merge and diverge analysis for all analysis scenarios evaluated as part of this study utilizing existing freeway segment and ramp geometry and capacities. Detailed study freeway ramp merge and diverge analysis worksheets are contained in Appendix L.

As shown in Table 11-1, the study freeway ramps are currently operating at an acceptable LOS (LOS D or better) and are forecast to continue to operate at an acceptable LOS for all future analysis scenarios evaluated as part of this study with the exception of the I-15 SB On-Ramp from Central Avenue (SR-74) which is forecast to operate at a deficient LOS (LOS E or worse) for Project Completion Conditions as well as Cumulative Conditions.

As previously noted, based on the Transportation Concept Report for the I-15 Freeway in the vicinity of the Central Avenue (SR-74) interchange, this section of the freeway is planned to be widened from its current configuration as three (3) mixed-flow lanes in each direction of travel to consist of the following:

- Three (3) mixed flow lanes and one (1) HOV lane in each direction travel south of the Central Avenue (SR-74) interchange; and
- Four (4) mixed flow lanes and one (2) HOT lane in each direction travel north of the Central Avenue (SR-74) interchange.

Also, Caltrans currently has plans to increase the I-15 / Central Avenue (SR-74) interchange capacity by reconstructing the interchange as a Type L-9.

Table 11-1 shows the resulting LOS of the I-15 SB On-Ramp from Central Avenue (SR-74) study freeway ramp operations for Project Completion Conditions as well as Cumulative Conditions after implementation of the planned freeway widening by Caltrans.

As shown in Table 11-1, the I-15 SB On-Ramp from Central Avenue (SR-74) study freeway ramp is expected to operate at an acceptable level after implementation of the planned improvements. Detailed study freeway ramp merge and diverge analysis worksheets are contained in Appendix L.

**TABLE 11-1**  
**Freeway Ramp Merge & Diverge Analysis Summary**

| Merge/Diverge Study Location      | Analysis Type | Analysis Scenario |     |              |     |                       |     |              |     |                                                                                |     |              |          |                                                                                      |          |              |          |

## **12.0 Findings and Recommendations**

---

### **12.1 Intersection Analysis Summary**

A summary of all recommended study intersection and study roadway segment improvements are listed in Table 12-1.

The recommended study intersection and study roadway segment improvements represent the minimum necessary improvements to meet level of service requirements. The proposed feasible study intersection and study roadway mitigation measures are also summarized on Exhibit 12-1.

See discussions related to feasibility of improvements to achieve acceptable operation at the Collier Avenue / Crane Street study intersection in Sections 7.3.1 and 7.4.1 of this report.

### **12.2 Site Access**

Access for the proposed project is planned as follows as shown in the most recent site plan provided on Exhibit 1-2:

- One right-in/right-out access location on Central Avenue (SR-74);
- One left-in/right-in/right-out access location on Collier Avenue. Left-turn in access at this location will be restricted through construction of a raised center median along Collier Avenue; and
- One full access location at the existing Collier Avenue/Crane Street intersection.

Additionally, as part of the proposed project, the following circulation system modifications are planned:

- At the intersection of Collier Avenue/Central Avenue (SR-74), widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing; and

- Modify/widen the eastbound Central Avenue (SR-74) from Collier Avenue to I-15 Southbound Ramps from two and three through lanes to consist of four through lanes.

It is also important that adequate sight distance be provided for drivers entering and exiting the project site.

- The minimum required sight distance should be provided at all access points.
- A limited use area is maintained where a clear line of sight can be established.
- The limited use area shall be used for the purpose of prohibiting or clearing obstructions to maintain adequate sight distance at intersections.
- Limited use area to be kept clear of all obstructions over 30 inches high, including vegetation.
- No trees, walls, or any obstructions shall be allowed in the limited use area.
- The toe of the slope shall not encroach into the limited use area.

## **12.3 Circulation Recommendations**

### **12.3.1 On-Site**

- I. Construct an on-site circulation system per the detailed site plan. Install stop signs, stop bars, and stop legends at all project access points.
- II. Restrict Project Access along Central Avenue (SR-74) to be right-in/right-out only. Install "No Left Turn" signage.
- III. Restrict Project Access along Collier Avenue between Central Avenue (SR-74) and Crane Street to be left-in/right-in/right-out only. Install "No Left Turn" signage.

The on-site recommendations are shown in Exhibit 12-2.

### **12.3.2 Area Wide**

- I. Contribute towards implementation of the identified feasible mitigation measures required to achieve acceptable operations.
- II. Complete half-section street improvements for Collier Avenue and Central Avenue (SR-74), adjacent to the site.
- III. Roadways in the area should be built out as planned in the City of Lake Elsinore Circulation Element as development occurs.
- IV. Traffic signing/stripping should be implemented in conjunction with detailed construction plans for the project site.

## **12.4 Safety and Operational Improvements**

Adequate sight distance should be provided at each project access location.

As is the case for any roadway design, the City of Lake Elsinore and/or Caltrans should periodically review traffic operations in the vicinity of the project once the project is constructed to assure that the traffic operations are satisfactory.

## **12.5 Regional Funding Mechanisms**

Participate in any approved transportation or development impact fees, such as TUMF fees, required by the County of Riverside.

## **12.6 Project Contribution**

Project Contribution for Mitigation Measures Identified for Existing Plus Project Conditions: The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are currently operating deficiently for Existing Conditions and are forecast to continue to operate deficiently for Existing Plus Project Conditions.

The proposed project will be required to make full contribution for implementation of the identified mitigation measures at study facilities that are currently operating acceptably for Existing Conditions and are forecast to operate deficiently for Existing Plus Project Conditions.

*Project Contribution for Mitigation Measures Identified for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project):* The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are currently operating deficiently for Existing Conditions and are forecast to continue to operate deficiently for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project).

The proposed project will be required to make full contribution for implementation of the identified mitigation measures at study facilities that are currently operating acceptably for Existing Conditions and are forecast to operate deficiently for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project).

*Project Contribution for Mitigation Measures Identified for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project):* The proposed project will be required to contribute a fair-share percentage for implementation of the identified mitigation measures at study facilities that are forecast to begin to operate deficiently for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project).

The project's fair-share traffic contribution represents the project's traffic contribution at each study area intersection as a percentage of the overall growth in traffic for both Project Completion Conditions and Cumulative Conditions.

The project's fair-share intersection contribution for Cumulative Conditions to intersections requiring feasible improvements necessary to meet level of service standards is shown in Table 12-2.

## 12.7 Summary of Mitigation Measures

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Existing Plus Project Conditions:

### **Int Mitigation #1**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

### **Int Mitigation #2**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following:

- a) Signalize the intersection.

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Project Completion Conditions (Existing Plus Ambient Growth Plus Proposed Project):

**Int Mitigation #3**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #1*):

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

**Int Mitigation #4**

**Int 4 – Collier Avenue / Crane Street:** The project applicant shall implement the following:

- a) Signalize the intersection.

**Int Mitigation #5**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #2*):

- a) Signalize the intersection.

The following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study intersections to a level considered less than significant for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project):

**Int Mitigation #6**

**Int 1 – Gunnerson Street – Strickland Avenue / Riverside Drive (SR-74):** This study intersection is currently deficient under existing conditions. The project applicant shall make a fair share contribution to implement the following (*identical to Int Mitigation #1 & #3*):

- a) Signalize the intersection.
- b) Restripe the northbound Strickland Avenue approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.
- c) Restripe the southbound Gunnerson Street approach from one shared left-turn/through lane and one right-turn lane to consist of one shared left-turn/through/right-turn lane.

**Int Mitigation #7**

**Int 4 – Collier Avenue / Crane Street:** This study intersection is forecast to also be deficient for Existing Plus Project Conditions. The project applicant shall implement the following (*identical to Int Mitigation #4*):

- a) Signalize the intersection.

**Int Mitigation #8**

**Int 5 – Collier Avenue / Chaney Street:** This study intersection is currently deficient under existing conditions. The project applicant shall

make a fair share contribution to implement the following (*identical to Int Mitigation #2 & #5*):

- a) Signalize the intersection.

#### **Int Mitigation #9**

**Int 9 – Dexter Avenue / Central Avenue (SR-74):** The project applicant shall make a fair share contribution to implement the following:

- a) Modify the eastbound Central Avenue (SR-74) approach from one left-turn lane, three through lanes and one right-turn lane to consist of one left-turn lane, two through lanes, one shared through/right-turn lanes and one right-turn lane.

Additionally, the following mitigation measures are identified to reduce the forecast significant traffic impacts at the impacted study roadway segments to a level considered less than significant for Cumulative Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project):

#### **Roadway Mitigation #1**

**Segment 1 – Collier Avenue from Riverside Drive to Central Avenue (SR-74):** The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from four-lanes to its ultimate classification as a six-lane Urban Arterial.

#### **Roadway Mitigation #2**

**Segment 6 – Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps:** The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.

**Roadway Mitigation #3****Segment 7 – Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue:**

The project applicant shall make a fair share contribution to implement the following:

- a) Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.

**12.8 Conclusions**

Based upon this traffic impact analysis for the proposed Central Plaza, the project can be accommodated with the implementation of feasible improvements/mitigation measures recommended in this report. A copy of the Approved Scoping Agreement for this project has been provided in Appendix A.

# Area-Wide Recommendations

The project applicant shall make a fair share contribution to implement the following study roadway segment modifications for Cumulative Conditions:

- Collier Avenue from Riverside Drive to Central Avenue (SR-74): Widen the roadway segment from four-lanes to its ultimate classification as a six-lane Urban Arterial.
- Central Avenue (SR-74) from I-15 Southbound Ramps to I-15 Northbound Ramps: Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.
- Central Avenue (SR-74) from I-15 Northbound Ramps to Dexter Avenue: Widen the roadway segment from six-lanes to its ultimate classification as an eight-lane Augmented Urban Arterial.

## On-Site Recommendations

### I. Site Access

Access for the proposed project is planned as follows as shown in the most recent site plan provided on Exhibit 1-2:

- One right-in/right-out access location on Central Avenue (SR-74);
- One left-in/right-in/right-out access location on Collier Avenue. Left-turn in access at this location will be restricted through construction of a raised center median along Collier Avenue; and
- One full access location at the existing Collier Avenue/Crane Street intersection.

Additionally, as part of the proposed project, the following circulation system modifications are planned at the intersection of Collier Avenue/Central Avenue (SR-74):

- Widen the northbound Collier Avenue approach from one left-turn lane, one through lane, and one right-turn lane with right-turn overlap phasing to consist of one left-turn lane, two through lanes, and two right-turn lanes with right-turn overlap phasing.

## On-Site Recommendations

### II. Sight Distance

It is also important that adequate sight distance be provided for drivers entering and exiting the project site.

- The minimum required sight distance should be provided at all access points.
- A limited use area is maintained where a clear line of sight can be established.
- The limited use area shall be used for the purpose of prohibiting or clearing obstructions to maintain adequate sight distance at intersections.
- Limited use area to be kept clear of all obstructions over 30 inches high, including vegetation.
- No trees, walls, or any obstructions shall be allowed in the limited use area.
- The toe of the slope shall not encroach into the limited use area.

### III. On-Site Recommendations

- Construct an on-site circulation system per the detailed site plan. Install stop signs, stop bars, and stop legends at all project access points.
- Restrict Project Access along Central Avenue (SR-74) to be right-in/right-out only. Install "No Left Turn" signage.
- Restrict Project Access along Collier Avenue between Central Avenue (SR-74) and Crane Street to be left-in/right-in/right-out only. Install "No Left Turn" signage.

**F. Other Jurisdictional Impacts**

Is the project within a City's sphere of influence or one-mile radius of City boundaries?

Yes X No \_\_\_\_\_

If so, name of City or Jurisdiction:

COUNTY OF RIVERSIDE

**G. Site Plan** (Copy Attached)

**H. Specific Issues to be addressed in the Study** (in addition of the standard analysis described in the Guidelines) - To be filled out by transportation department. Note: If the traffic study states that a "traffic signal is warranted" or "a traffic signal appears to be warranted", or similar statement, at an existing unsignalized intersection, under existing conditions, 8-hour approach traffic volume information must be submitted in addition to the peak hourly turning movement counts for that intersection.

TO ADDRESS CALTRANS INITIAL COMMENTS, THE ANALYSIS WILL EVALUATE THE I-15 FREEWAY MAINLINE NORTH AND SOUTH OF CENTRAL AVENUE, MERGE & DIVERGE ANALYSIS OF I-10 NB AND SB RAMPS AT CENTRAL AVE, AND SYNCHRO QUEUING ANALYSIS ALONG CENTRAL AVENUE BETWEEN COLLIER AVENUE AND DEXTER AVENUE.

TRAFFIC ANALYSIS WILL EVALUATE EXISTING AND PROJECT OPENING YEAR CONDITIONS. NO LONG RANGE ANALYSIS WILL BE REQUIRED

**I. Existing Conditions**

Traffic count data must be new or recent. Provide traffic count dates if using other than new counts. Date of counts:

NEW COUNTS

Note: Traffic Study Submittal Form and appropriate fee must be submitted with, or prior to submittal of this form. Transportation Department staff will not process the Scoping Agreement prior to the fee.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - AM Peak Hour**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **1509**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **51**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - PM Peak Hour**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **2010**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **32**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## Traffic Signal Warrants Worksheet

(Average Traffic Estimate Form)

Urban/Rural (1/2) = 2

SCENARIO: **Existing Conditions**

MAJOR STREET: **Collier Ave** ADT = **12,624** Lanes= **1**

MINOR STREET: **Crane St** ADT = **498** Lanes= **1**

**(Based on Estimated Average Daily Traffic-See Note)**

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1033**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **18**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1000**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **59**

Number of Approach Lanes Minor Street = **1**

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **739**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **330**

Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **547**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **382**

Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1071**  
Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **40**  
Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1033**  
Number of Approach Lanes Major Street = **59**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **59**  
Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **769**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **348**

Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **577**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **397**

Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **142**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Spring St**

High Volume Approach (VPH) = **383**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing Plus Project Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **379**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Spring St**

High Volume Approach (VPH) = **157**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing+Ambient+Project Conditions - AM Peak Hour**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **1624**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **62**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing+Ambient+Project Conditions - PM Peak Hour**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **2141**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **41**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## Traffic Signal Warrants Worksheet

(Average Traffic Estimate Form)

Urban/Rural (1/2) = 2

SCENARIO: **Existing+Ambient+Project Conditions**

MAJOR STREET: **Collier Ave** ADT = **13,950** Lanes= **1**

MINOR STREET: **Crane St** ADT = **500** Lanes= **1**

**(Based on Estimated Average Daily Traffic-See Note)**

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing+Ambient+Project Conditions - AM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1112**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **40**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Existing+Ambient+Project Conditions - PM Peak Hour**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1076**  
Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **62**  
Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - AM**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **2064**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **62**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - PM**

Major Street Name = **Riverside Drive**

Total of Both Approaches (VPH) = **2733**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Strickland Ave - Gunnerson**

High Volume Approach (VPH) = **41**

Number of Approach Lanes Minor Street = **1**

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - AM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1417**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **40**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - PM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1464**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Crane St**

High Volume Approach (VPH) = **62**

Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - AM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **1083**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **394**

Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - PM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **752**  
Number of Approach Lanes Major Street = **1**

Minor Street Name = **Chaney St**

High Volume Approach (VPH) = **661**  
Number of Approach Lanes Minor Street = **2**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Note: Use only for NEW INTERSECTIONS or other locations where it is not reasonable to count actual traffic volumes.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - AM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **173**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **Spring St**

High Volume Approach (VPH) = **433**

Number of Approach Lanes Minor Street = **1**

### WARRANTED FOR A SIGNAL

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

## WARRANT 3, PEAK HOUR (70% FACTOR) (Rural Areas)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 70 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **Ex+Ambient+Cumulative+Project Conditions - PM**

Major Street Name = **Collier Ave**

Total of Both Approaches (VPH) = **465**  
Number of Approach Lanes Major Street = **1**

Minor Street Name = **Spring St**

High Volume Approach (VPH) = **225**  
Number of Approach Lanes Minor Street = **1**

### SIGNAL WARRANT NOT SATISFIED

\* Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 14 (16%), Referenced to phase 2:NWTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.69

Intersection Signal Delay: 10.5

Intersection LOS: B

Intersection Capacity Utilization 75.7%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 2: RIVERSIDE DR & COLLIER AVE

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 52 (58%), Referenced to phase 1:SEL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.92

Intersection Signal Delay: 26.6

Intersection LOS: C

Intersection Capacity Utilization 60.6%

ICU Level of Service B

Analysis Period (min) 15

### Splits and Phases: 3: CENTRAL AVE & COLLIER AVE

## Intersection Summary

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 45 (50%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.84

Intersection Signal Delay: 15.8

Intersection LOS: B

Intersection Capacity Utilization 72.0%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 7: CENTRAL AVE & I-15 SB ON RAMP/I-15 SB OFF RAMP

## Queues

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 7 (8%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.80

Intersection Signal Delay: 23.2

Intersection LOS: C

Intersection Capacity Utilization 72.0%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 8: CENTRAL AVE & I-15 NB OFF RAMP/I-15 NB ON RAMP

## Intersection Summary

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 0 (0%), Referenced to phase 4:NET and 8:SWT, Start of Green, Master Intersection

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 2.31

Intersection Signal Delay: 96.6

Intersection LOS: F

Intersection Capacity Utilization 74.3%

ICU Level of Service D

Analysis Period (min) 15

### Splits and Phases: 9: CENTRAL AVE & DEXTER AVE

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

# HCM 2010 Signalized Intersection Summary

## 10: CENTRAL AVE & CAMBERN AVE

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 85 (94%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.03

Intersection Signal Delay: 41.6

Intersection LOS: D

Intersection Capacity Utilization 72.2%

ICU Level of Service C

Analysis Period (min) 15

### Splits and Phases: 10: CENTRAL AVE & CAMBERN AVE

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 90

Actuated Cycle Length: 75.9

Natural Cycle: 80

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 19.0

Intersection LOS: B

Intersection Capacity Utilization 60.0%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 11: CENTRAL AVE & ROSETTA CNYN DR

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 78 (82%), Referenced to phase 2:NWTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.93

Intersection Signal Delay: 24.5

Intersection LOS: C

Intersection Capacity Utilization 82.0%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 2: RIVERSIDE DR & COLLIER AVE

## Intersection Summary

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 43 (45%), Referenced to phase 1:SEL, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.35

Intersection Signal Delay: 36.2

Intersection LOS: D

Intersection Capacity Utilization 72.9%

ICU Level of Service C

Analysis Period (min) 15

### Splits and Phases: 3: CENTRAL AVE & COLLIER AVE

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 45 (47%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.02

Intersection Signal Delay: 24.9

Intersection LOS: C

Intersection Capacity Utilization 76.8%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 7: CENTRAL AVE & I-15 SB ON RAMP/I-15 SB OFF RAMP

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 7 (7%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 25.1

Intersection LOS: C

Intersection Capacity Utilization 76.8%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 8: CENTRAL AVE & I-15 NB OFF RAMP/I-15 NB ON RAMP

## Intersection Summary

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 0 (0%), Referenced to phase 4:NET and 8:SWT, Start of Green, Master Intersection

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.84

Intersection Signal Delay: 83.5

Intersection LOS: F

Intersection Capacity Utilization 83.2%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 9: CENTRAL AVE & DEXTER AVE

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

# HCM 2010 Signalized Intersection Summary

## 10: CENTRAL AVE & CAMBERN AVE

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 85 (89%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.31

Intersection Signal Delay: 41.7

Intersection LOS: D

Intersection Capacity Utilization 84.0%

ICU Level of Service E

Analysis Period (min) 15

### Splits and Phases: 10: CENTRAL AVE & CAMBERN AVE

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

### Intersection Summary

Cycle Length: 95

Actuated Cycle Length: 72.1

Natural Cycle: 80

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.50

Intersection Signal Delay: 8.4

Intersection LOS: A

Intersection Capacity Utilization 46.6%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 11: CENTRAL AVE & ROSETTA CNYN DR

### Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 51 (43%), Referenced to phase 2:NWTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.67

Intersection Signal Delay: 9.7

Intersection LOS: A

Intersection Capacity Utilization 77.9%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 2: RIVERSIDE DR & COLLIER AVE

### Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 90 (75%), Referenced to phase 1:SEL, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.89

Intersection Signal Delay: 25.4

Intersection LOS: C

Intersection Capacity Utilization 65.7%

ICU Level of Service C

Analysis Period (min) 15

### Splits and Phases: 3: CENTRAL AVE & COLLIER AVE

### Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 1 (1%), Referenced to phase 4:NET and 8:SWT, Start of Green

Natural Cycle: 70

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 22.8

Intersection LOS: C

Intersection Capacity Utilization 73.6%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 7: CENTRAL AVE & I-15 SB ON RAMP/I-15 SB OFF RAMP
